Volume 8
1969

Number One

Hierarchical structure for data management 2
W. R. Henry

GPSS/360—an improved general purpose simulator 16
R. L. Gould

A teleprocessing approach using standard equipment 28
R. D. Wade, G. P. Cawsey, and R. A. K. Veber

Coding for error control 48
D. T. Tang and R. T. Chien

Number Two

Some principles of time-sharing scheduler strategies 94
H. Hellerman

An auxiliary processing system for array calculations 118
J. F. Ruggiero and D. A. Coryell

A pseudo-random number generator for the System/360 136
P. A. W. Lewis, A. S. Goodman, and J. M. Miller

A network algorithm for empty freight car allocation 147
W. W. White and A. M. Bomberault

Number Three

A three-value computer design verification system 178
J. S. Jephson, R. P. McQuarrie, and R. E. Vogelsberg

Internal sorting with minimal comparing 189
L. J. Woodrum

Problem formulation using APL 204
H. G. Kolsky

Determining economic sampling plans 220
E. W. Stacy, L. E. Hunsinger, and J. F. Price

Number Four

A perspective on system performance evaluation 252
M. E. Drummond, Jr.

Simulating operating systems 264
P. H. Seaman and R. C. Soucy

Trace-driven system modeling 280
P. S. Cheng

Using system monitor output to improve performance 290
A. J. Bonner

Measurement of system operational statistics 299
W. I. Stanley

A synthetic job for measuring system performance 309
W. Buchholz

Effects of storage contention on system performance 319
C. E. Skinner and J. R. Asher
